

## GetRotation

*(Information and examples taken from the DroidScript documentation)*

### Description

The **GetRotation** method gets the current rotation of the device. It will return one of the following numeric values:- 0, 90, 180, 270

```
rot = app.GetRotation();
```

See also [GetOrientation](#)

---

### Example

```
function OnStart()
{
    rot = app.GetRotation();
    app.ShowPopup( rot );
}
```
