

GetDisplayHeight

(Information and examples taken from the DroidScript documentation)

Description

The **GetDisplayHeight** method gets the height of the screen area available to your app in pixels. This excludes the notification bar area at the top of the screen (if it's visible).

```
app.GetDisplayHeight();
```

Example

```
function OnStart()
{
    height = app.GetDisplayHeight();
    app.ShowPopup( height );
}
```
