Alert

(Information and examples taken from the DroidScript documentation)

Description

The **Alert** method shows a popup message on the screen which stays on screen until the user presses the Ok button or back button.

```
app.Alert( text, title );
```

Example - No Title

```
function OnStart()
{
    app.Alert( "Hello World!" );
}
```

Example - Title

```
function OnStart()
{
    app.Alert( "Hello World!", "Message" );
}
```
