

FileExists

(Information and examples taken from the DroidScript documentation)

Description

The **FileExists** method checks if a file exists in internal or external file storage.

```
exists = app.FileExists( fileName );
```

See also [FolderExists](#)

Example

```
function OnStart()
{
    exists = app.FileExists( "/sdcard/wftest.txt" );
    app.ShowPopup( exists );
}
```
